 Breastfeeding is one of the best
investments in global health.
Every \$1 invested in breastfeeding
generates \$35 in economic returns¹⁰

Shorter durations of breastfeeding
for children were associated with a
**2.6-point loss
in IQ scores**¹⁰

Not breastfeeding is associated with
**economic losses of about
\$302 billion** annually or 0.49%
of world gross national income¹⁰

Economic and environmental costs of not breastfeeding

The short- and long-term costs of not breastfeeding affect the whole of society in the following ways:

- Babies who are not breastfed have lower IQs, reducing their chances of achieving a good education and subsequently earning less later in life.
- Low breastfeeding rates contribute to increased sickness, thereby incurring higher health care and treatment costs.
- The production, packaging, storing, distribution and preparation of infant formula contributes to environmental damage.
